Registered charity number 1097899
The Energy Institute (EI) is the chartered professional membership body for the energy industry, supporting over 23,000 individuals working in or studying energy and 250 energy companies worldwide. The EI provides learning and networking opportunities to support professional development, as well as professional recognition and technical and scientific knowledge resources on energy in all its forms and applications.

The EI's purpose is to develop and disseminate knowledge, skills and good practice towards a safe, secure and sustainable energy system. In fulfilling this mission, the EI addresses the depth and breadth of the energy sector, from fuels and fuels distribution to health and safety, sustainability and the environment. It also informs policy by providing a platform for debate and scientifically-sound information on energy issues.

The EI is licensed by:
- the Engineering Council to award Chartered, Incorporated and Engineering Technician status;
- the Science Council to award Chartered Scientist status, and
- the Society for the Environment to award Chartered Environmentalist status.

It also offers its own Chartered Energy Engineer, Chartered Petroleum Engineer and Chartered Energy Manager titles.

A registered charity, the EI serves society with independence, professionalism and a wealth of expertise in all energy matters.

This publication has been produced as a result of work carried out within the Technical Team of the EI, funded by the EI's Technical Partners. The EI's Technical Work Programme provides industry with cost-effective, value-adding knowledge on key current and future issues affecting those operating in the energy sector, both in the UK and internationally.

For further information, please visit [http://www.energyinst.org](http://www.energyinst.org)

The EI gratefully acknowledges the financial contributions towards the scientific and technical programme from the following companies:

- BP Exploration Operating Co Ltd
- BP Oil UK Ltd
- Centrica
- Chevron
- CLH
- ConocoPhillips Ltd
- DCC Energy
- DONG Energy
- EDF Energy
- ENGIE
- ENI
- E. ON UK
- ExxonMobil International Ltd
- Kuwait Petroleum International Ltd
- Maersk Oil North Sea UK Limited
- Nexen
- Phillips 66
- Qatar Petroleum
- RWE npower
- Saudi Aramco
- Scottish Power
- SGS
-Shell UK Oil Products Limited
- Shell U.K. Exploration and Production Ltd
- SSE
- Statkraft
- Statoil
- Talisman Sinopec Energy (UK) Ltd
-Tesoro
- Total E&P UK Limited
- Total UK Limited
- Tullow Oil
- Valero
- Vattenfall
- Vitol
- World Fuel Services

However, it should be noted that the above organisations have not all been directly involved in the development of this publication, nor do they necessarily endorse its content.

ACKNOWLEDGEMENTS

The Energy Institute (EI) would like to express its appreciation of the work carried out by Professor Tom Sorahan of the University of Birmingham as the author of the report.

The update of the report has been overseen by the EI's Health Technical Committee, and the EI wishes to record its gratitude for the valuable contributions of the committee’s membership, including representatives from the following companies/organisations:

   Abermed/International SOS
   BG Group
   BOHRF
   BP
   Capita
   Centrica
   Chevron
   ConocoPhillips
   ExxonMobil
   Maersk Oil
   Oil & Gas UK
   RS Occupational Health
   Saudi Aramco
   Shell
   Talisman Energy
   University of Portsmouth

The author is grateful to the EI for its financial support in carrying out this work, the Office for National Statistics, the Health and Social Care Information Centre, the General Register Office for Scotland for the supply of follow-up particulars and the Vital Statistics Offices of England, Wales and Scotland for supplying anonymised historical cancer registration data for the generation of cancer incidence rates.
1 INTRODUCTION

The EI has developed an epidemiological cohort study into the mortality and cancer morbidity experience of male employees from eight oil refineries in the UK (Rushton and Alderson, 1981; Rushton, 1993a; Sorahan et al, 2001a; Sorahan et al, 2002; Sorahan, 2007). A separate cohort study is also available for UK petroleum distribution workers (Sorahan et al, 2002; Sorahan, 2007; Rushton and Alderson, 1983; Rushton, 1993b, Sorahan et al, 2001b).

The original cohort comprised 34,569 oil refinery workers (Rushton, 1993a). All these male employees had a minimum period of employment of 12 months in the period 1950–75; some study subjects were first employed around the turn of the century. The cohort was re-defined in 1995 so that findings would be relevant to more recent work conditions, which can be described with some confidence (Sorahan et al, 2001a; Sorahan et al, 2002; Sorahan, 2007). The updated analyses are now limited to those 28,554 workers first employed after 1 January 1946. The new findings refer in the main to an entry cohort (workers first employed in the period 1950–74). The extent of any ‘survivor population effect’ present in the sub-cohort of workers first employed in the period 1946–49 was judged likely to be modest (such workers would only appear in the study if they remained (‘survived’) in the industry until 1 January 1951).

A further eight years of mortality and cancer registration data (2004–2011) were available for analysis in the overall period of follow-up (1951–2011). The objectives of the study were to summarise available mortality and cancer registration data and to determine whether any part of the mortality and morbidity experience of the cohort might be related to occupational exposures; in which event, further analyses capable of investigating the potential role of specific occupational exposures might be needed.
